#### Weather Summary/Alert:

Last seven days (10 to 16 January) observed 2.8 mm rainfall with maximum and minimum temperature varying between 15.0-23.0 and 4.9-12.8oC, respectively. The weather was observed to be partially cloudy on few days. The morning and evening relative humidity varied between 76-100% and 43-89%, respectively. The wind speed mostly ranged between 1.9-6.2 kmph blowing primarily from the east, south-east, south-west and north-north-east direction. The upcoming 5 day forecast shows no rainfall with maximum and minimum temperature varying between 23.0-24.0oC and 6-8oC. The wind is expected to blow at a speed of 3-4 kmph from North-east, South-East, North and north-north-west direction. Dry weather is likely to prevail during the period and a yellow warning has been given for the occurrence of moderate to dense fog at few places on 17 January.

#### **General Advisory:**

The weather forecast and agrometeorological advisory is regularly updated on the "Meghdoot App" and "Damini App" is also available to get lightning information. Meghdoot and Damini apps can be downloaded from Google Play Store (Android users) and App Center (iOS users). The NDVI composite shows moderate agricultural vigour in the region. The extended range forecast system from 17-23 January indicates deficit rainfall and normal maximum-minimum temperature trend.

#### **SMS Advisory:**

The upcoming week has been predicted to be dry so the farming operations should be scheduled accordingly and irrigation should be applied in case of ground frost occurrence.

#### **Crop Specific Advisory:**

| Crop(Vari<br>eties)            | Stage                      | Crop Specific Advisory   |
|--------------------------------|----------------------------|--|
| Chickpea/Lentil                | vegetative/flowering       | Regular hoeing-weeding should be done in the crops and irrigation<br>should be applied as required. In chickpea/lentil, in case of aphid attack<br>recommended practices should be followed.   |
| Rapeseed(Lahi)<br>/Rai/Mustard | flowering/pod<br>formation | In case of late sown rapeseed harvesting should be done at maturity<br>while in case of mustard (Rai) irrigation should be applied at flowering<br>and pod formation. Regular monitoring of mustard for pest and disease<br>attack should be done and recommended practices for control should be<br>followed. In case of alternaria blight Mancozeb 75% @2kg/ha in 800-<br>1000 litre water should be sprayed 2-3 times at an interval of 10 days |

|              |            | and in case of white rust occurrence spray of Metalaxyl 35 WS or<br>Ridomil MZ 72 @ 2.5kg/ha in 800-1000 litre water should be sprayed<br>2-3 times at an interval of 10 days. Downy mildew disease can be<br>treated using Metalaxyl 35 WS or Ridomil MZ 72 @ 2kg/ha in 500 litre<br>water which can be sprayed 1-2 times.   |
|--------------|------------|---|
| Wheat        | Vegetative | In case of weed emergence in late sown crop, manual weeding and hoeing<br>should be followed or chemical application as per recommendation should<br>be followed along with irrigation application as per requirement. In case of<br>zinc deficiency recommended dose of zinc sulphate spray should be<br>scheduled for the crop and regular monitoring for diseases should be done.<br>On occurrence of yellow rust appropriate measures should be taken up. |
| Barley       | Vegetative | The late sown crop should be monitored for weeding and hoeing and irrigation application as per requirement should be done.   |
| Sugarcane    | Vegetative | Mature sugarcane should be harvested at 18% brix value. The autumn sugarcane should be monitored and appropriate farming operations like water shoot cutting should be done.  |
| Fodder crops | Vegetative | The crops should be harvested at appropriate time and irrigation should<br>be applied just after harvesting. In case of oats, just after irrigation<br>application 30 kg Nitrogen/ha should be applied.   |

### Horticulture Specific Advisory:

| Horticulture<br>(Varieties) | Stage                         | Horticulture Specific Advisory  |
|-----------------------------|-------------------------------|---|
| Onion                       | Transplanting/<br>seedling    | The transplanting of onion crop should be completed and<br>appropriate measures to protect the seedlings against extreme cold<br>should be taken up.  |
| Vegetable pea               | Pod<br>formation/maturity     | Regular hoeing-weeding should be done in the crops and irrigation<br>should be applied as required. On the occurrence of white cotton<br>like growth in the pods or stem of the pea, infected plants should<br>be removed and destroyed.                  |
| Tomato/chilli               | Flowering/ Fruit<br>formation | The crop should be regularly monitored for disease transferring insects and controlled with the recommended practices. To control the late blight disease in tomatoes, it is advised that a solution of Mancozeb @ 2.5g/liter of water should be sprayed. |
| Potato                      | Maturity                      | To control the late blight disease in potato, it is advised that solution of Mancozeb@ 2.5g/liter of water should be sprayed.   |

Live Stock Specific Advisory

| Livestock   | Live Stock Specific Advisory   |
|-------------|--|
| Cow/Buffalo | To save the animal from cold, increase the amount of oil and Jaggery (Gur) in the food of animals.<br>Caraway (Ajwain) and gur also be given to the animals. To save the animals from cold, proper<br>arrangement of animal shed should be done. Vaccination should be given to the animals to save them<br>from Rinderpest disease (Sheetla rog). The animal feed should be increased by 10% for extra energy<br>requirement. |
| Sheep/Goat  | Keep the delivery chambers of sheep/goats clean and neat.  |

#### Others (Soil/Land Preparation) Specific Advisory

| Others (Soil / Land<br>Preparation)(Varieties) | Others (Soil / Land Preparation) Specific Advisory  |
|--|---|
| General Advice                                 | There is likely occurrence of cold conditions and dense fog in the region so appropriate measures to protect the young seedlings should be taken up. The weather is congenial; for disease occurrence in most of the crops so appropriate sprays should be done to protect the crops. |
